Forge of empires guide negotiate

Forge of empires negotiation tips. Forge of empires negotiation guide. Forge of empires negotiation strategy. Forge of empires guild expedition negotiation tips.

In the previous example, there are only 4 matching resources, try duplicating the "supplies" in the third turn, since it was immediately "correct" in the first shift, so it is more likely to be the duplicate resource. Try the coins in two positions of "wrong person" 1 supplies of wine coins Matro stone 2 coins of stone marble coins came after the second shift in the previous example, resources are all "wrong person". Keep in mind that it usually only has a possibility of success guaranteed in any negotiation with 3 attempts if you have 4 goods or types of articles to pay in the negotiations. The impulse of the Friends of the Tavern "Turn" is located in the Taberna store in the category "Resources Botura" and costs 1500 Tavern Silver. In the first shift of the previous example, the second position was "incorrect", so it is known that this person does not want "supplies", but it is known that the 4th position that the person does not want "stone" (because it was "incorrect "Person) and does not want" supplies "(because it was" incorrect "in another position). Unfortunately, because we have bad luck after step 1, we have no certainty at this stage, so we have to do some conjectures. Step 4: Here are the results. Fill them and rejoice them. We do not have enough information to know if the currencies were the duplicate resource, but since it has been attempted in more positions than other resources, it is actually less likely to be duplicate than other resources. Then, the "correct" resource has a higher probability of having the duplicate (since it had the correct position immediately means that it is more likely to be more than one of them so that it happens). In any case, I am trying to show him techniques for us to have another chance to exercise them. Step 8: Unfortunately, it did not work. Apart from Initial levels at levels 1-3, there is no guarantee that any individual negotiation attempt is successful, even with the umbrella of the tavern for additional turn. So for Resources, the strategy is to maximize the possibility of a successful negotiation within 4 turns. So fill that. Try 1 Step 1: The first thing I did is choose the boost of the tavern for your additional turn. Step 4: Only 1 blow, so we know that the 5 points will be filled with those 3 products. Your most cheap resource will be coins or supplies, depending on what is most. Repeat this strategy in each turn. The first 4 articles were all the reds, so we have had luck (sometimes it happens). Like the case of 5 resources, first offers 5 different resources. This strategy does not explain all cases of minor corner, but try to explain some general approaches to increase the possibility of success, particularly the sections on "not all duplicates are equal" and "differ" the right resources. "Fill out. Places 1 and 2 with ropes because I did not use it in places 3-5. In general, an increase of an "additional turn" for 15 minutes is long enough to make a complete set of 8 attempts, so approximately half level. Then, after putting coins and supplies, it has 3 points to fill. It is useless to try to fight through the first four meetings at level 1 in GE, since it only requires coins and supplies for both First and an extra good for this last. Places 2 and 4 should be herbs because we already tried ropes. Simply offer every resource in turn 1 coins coins coins coins 2 supplies supplies supplies 2 wine And it came for 4 resources [] This is the same method as up to 3 resources, but it requires the use of increased "additional turn" of friends to ensure success. For places 3 and 4, choose any of the other 2 products, but try to use different products so that, in the next step, we can use comments about whether of them is red. For 6 or more resources [] for 6 or more resources, the probability of duplication decreases. Just choose the goods of any age, but make sure you have a different good for each selection. Best odds in point 4, so we put herbs there. Step 2: Now look at the results, 4 of They are yellow, so we know 4 of the 5 products. Step 6: It is easy now because there are only 2 possibilities. In a separate text editor, write down all the products that are presented in the negotiation, and then organize them by most of which you have to have at least. Then, if necessary, it offers its final resource. I prefer to risking coins and supplies as goods. If there is no "right" in the first shift, then duplicate the most cheap resource, but try to offer duplicates in positions that gave "incorrect person" (and not "incorrect"). Then, in the third turn, try duplicating another resource (stone, marble or wine). Step 5: I will simply change the goods to the right as an easy way to get them in a different place. For your first turn, offer your 'cheapest' resource to all the premises. I canceled so you can try again and, maybe, maybe we get a little more lucky. If we did not have such a lucky, we could have used the information that the ropes will go in Spot 3 because we have already tried it in places 2 and 4. If some of the resources are "incorrect" (that is, not the person wants it), Then it means that some of the resources are necessary for more than one person. The strategy changes according to the number of different resources involved in the negotiation. For 5 resources, first offers one of each resource. For his second turn, he offers his next 'cheapest' resource. Step 3: Then, in the second round, I will place the 4 products that we do not put it together. Step 6: Here are the results. For example, if in the first shift, a resource was "correct" and 3 other resources were "wrong person". Then, that means that the 4 articles of the 1st shift are the only involved. If you need to enter 3 or 4, finish the order, then restart the order with the last 2 bosses. Instead of worrying about where they go those They focus on the creation, which is the 5th one. This strategy works almost every time, and combined with the additional impulse of the taberna of friends, it is almost impossible for no no Order of preference [] This strategy is known as the order of preference. I suppose you will not have to worry about that. If this is the case, then you need to try different combinations with at least one of each resource unique and duplicate some resources to fill the gaps. At the beginning, it has 5 points to fill and can select from 9 articles. Since there are 5 points to fill and only 4 products, he knows that at least one will be repeated at least one good. If all are "correct" or "incorrect person" (ie, not "incorrect"), then there is only 1 of each resource, so just try different combinations until the correct one is found. The priority is to test all resources at least once as soon as possible. At point 3, we have only used 1 well, so there is a probability of 1 in 3 that strings are the correct option. Up to 3 resesaku [] this is quite direct, and does not require the use of the "additional twist" impulse of friends Tavern. The first priority is to review all resources as less once, even if that means not to try some of the previous resources of "incorrect person". This strategy focuses on GE's negotiation with the increase of the "additional twist" of the Friends Taberna for 15 minutes and avoiding the use of diamonds. That, obviously, in point 1 because we have tried it anywhere else. Try new wood and dye resources in previous positions of "misconception" 1 coins Supplies Wine Stone Mármol 2 Wine Tint Stone after excluding all "incorrect" resources, if there are less than 5 matching resources, then there is Duplicate Having 4 shifts instead of 3 shifts significantly increases successful probability negotiation (ie, usually have success). If possible, you must offer new resources in positions that have previously given "incorrect person" instead "Incorrect". We will arrive supplies because since I have no certainty, it could minimize my possible loss. Try new wooden resources and dye preferably to marble in the second second 1 coins SUPPLIES WINE MARMOL STONE 2 PLACE OF WINE DYE Deferred to the "correct" resources [] There may be times you have resolved when it will be the "correct" resource for a certain position (by a disposal process). But still he has not done it offered that resource yet. The focus of the strategy is to maximize the possibility of success within 4 shifts according to the probability of different cases. If it is not its last (fourth), return and it is trying to identify duplicates, then use the space to test other duplicate possibilities and save that it gives the correct resource until the last turn. In the first shift, select 5 different elements, including coins and supplies. Usually, I choose what more, but that's because I'm always in some articles. Usually, I'm going to choose coins or supplies. For 5 resources [] for 5 resources, there are no sufficient shifts to use the simple approach to guarantee success. So now we will focus on obtaining the right positions. Not all duplicates are the same [] when considering what resource duplique, choose those that are more likely to be a duplicate. However, these techniques will increase the probability of success and reduce or eliminate the need for diamond expenses. For the second shift, make sure that first offer resources that have not been tried. Now we have to discover point 3. The reason for this is to maximize the information for each position. Step 3: Below, I try the other 4 articles that I have not tried yet. Choose one at random. For the fifth selection, I will place one of the yellow articles. Normally, you only need 15 minutes one because you will stay without attempts before 15 minutes are over. The wine has greater chances of being duplicated because it hits the correct position 1 coins supplies Wine MARMOL Stone 2 Mármol de Marmol From wine, by offering duplicates, try to offer them in places that have previously given "wrong person" instead of "incorrect". Step 7- From They are still yellow, we need to find out where they go. This is because the new resource can also be "incorrect", and a position that has two "incorrect" entails less information than a position that an "incorrect" person has and an "incorrect". Step 1 Á e á, ~ Starting point, 9 Articles to fill 5 points Step 2: You choose 5 different articles and the results tell me 2 of the 5 articles. This set of steps is meant to suggest techniques that are Useful during GE negotiations. We use the same argument for herbs in places 3 and 4. Spot 3 should be ropes because we already tried herbs. At this point, it is a blind guess. Step 5: I know that point 5 is bricks , So fill that. Keep in mind that if the first turn offers too many "correct" resources, this can really diminish the possibility of success, since there are fewer positions to work for information about the remaining resources. If we wanted to spend Diamonds, we would only need to exchange positions 3 and 4. Since we have already used 2 products in point 2, there is a probability of 1 in 2 that strings are the correct option. Then, exchange the goods to each person. As I need to fill Point 5, I will choose one of the yellow 2, so we help reduce the position. In the following example, the two duplicate currencies are not offered in the position of the "incorrect" supplies. At point 5, we have tried everything except supplies, so we filled that. I try 2 ok, my second attempt worked better. We know that the ropes need to go at point 2 or 3. So now we use what we learned and see where it takes us. If you need to enter 5 items, follow the order. If they have the same opportunity, just choose how cheap. Since there are better odds in point 2, we put cords there. So try different duplicates, starting with the duplicates more duplicates. duplicates.
